About the Project

The area's best internet is coming!

Anthem Broadband is actively constructing a new fiber internet project that will bring all of Elko and Spring Creek the fastest and most reliable fiber internet service available. This new plan is scheduled to be completed in as little as two years, without being reliant on the schedules of others, like the gas company. Those that sign up will have NO construction fee, NO installation fee, NO activation fee, and NO contract. We believe you will be so amazed by the service you'll never want to go anywhere else.

The new Digital Transformation Project will utilize redundant service paths to the east and west to provide the most reliable service available. We will also be utilizing a lesser used installation practice, called Active Ethernet, that will give every location a direct connection back to a switch, not a shared line that could mean your neighbors can affect the speeds you are getting.

What makes it unique?

We say "No" a LOT

NO construction fee
NO installation fee
NO activation fee
NO contract
NO price hikes
NO data caps
NO throttling
NO credit check
NO rental
NO waiting for the gas company

Includes:

Wi-Fi Managed Router
Guardian Parental Controls*

The Anthem Difference

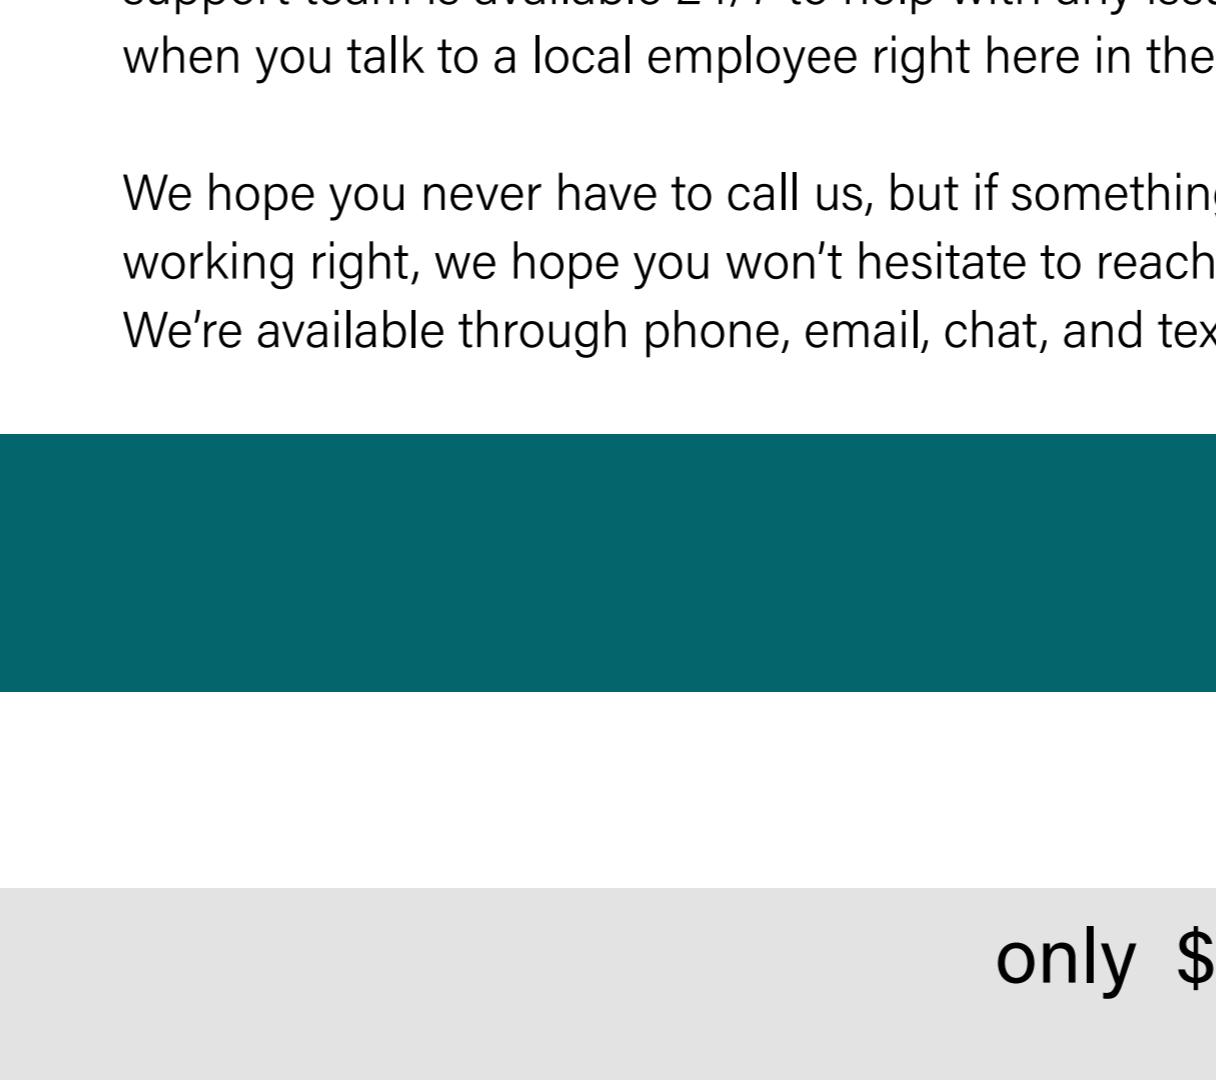

Think of what you could do with a Gig!

Keep everyone connected and happy.

There is enough speed to go around. Steam moves, play games, video chat, shop, and so much more. Everyone can do their own thing and not worry about how it affects others.

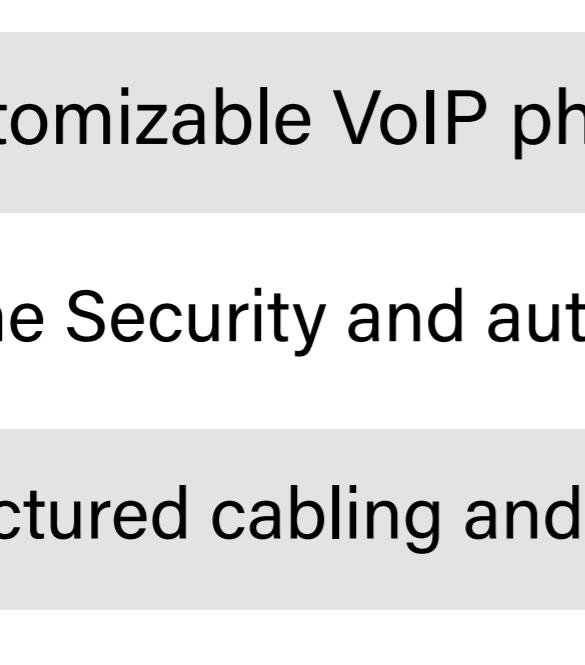

Stay in control

Anthem's own Guardian content filtering and device management makes it easy to pause the internet, set limits, review data usage, and control your Wi-Fi.

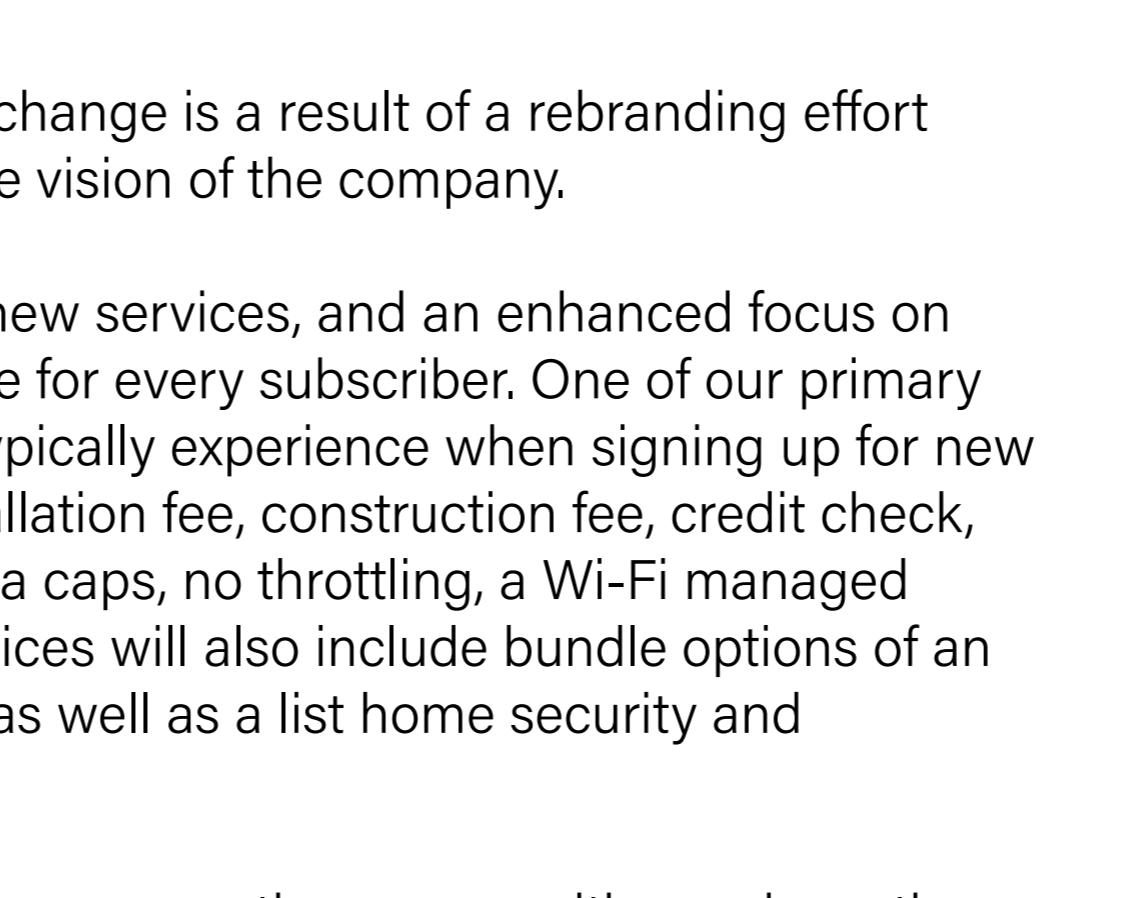

Watch what you want

No cable needed. With so many streaming services available, you can always find the programs you love to watch, when you want to watch them, with a gig of internet, everyone in the house can stream on their own device without experiencing buffering or downtime. Now all you need is a lot more popcorn to enjoy the shows.

Give everyone a phone

Bundle your service with a residential or business VoIP phone service. It's the perfect marriage of a home phone and the internet. Get unlimited minutes and put phones in every room so you don't have to buy the kids cell phones. Turn voicemail into emails, forward calls to other calls, even take your home phone number with you when you travel.

Protect your home

Home security and internet go hand in hand. By bundling a home security system you'll always know what is happening at home, whether you're at the store or on the other side of the world. Motion sensors, door alarms, video cameras, and other monitoring tools make it easy to keep tabs on what's going on when you are away.

What Happened to Safelink?

Safelink Internet is now Anthem Broadband! The name change is a result of a rebranding effort designed to mirror the growth, transformation, and future vision of the company.

The new direction includes new product plans, a list of new services, and an enhanced focus on customer service and creating an exceptional experience for every subscriber. One of our primary goals is to remove any obstacle that customers would typically experience when signing up for new service. Customers will NOT have any activation or installation fee, construction fee, credit check, or contract. Every service will continue to include no data caps, no throttling, a Wi-Fi managed router, and Guardian parental controls built in. New services will also include bundle options of an enhanced residential and business VoIP phone and fax as well as a list home security and automation solutions.

During all its history, Safelink Internet has been focused on connecting communities and creating solutions for rural areas that would otherwise have little to no option for internet service. As a result, Safelink has become a leader in the industry and the largest wireless internet service provider in Idaho and the surrounding areas.

Nevertheless, our business has undergone a significant transformation in the last few years that has justified a new brand that will better reflect where the company is and where we plan to be in the future. Anthem has been designed to reflect what our original mark stood for while simultaneously moving the brand forward, acknowledging our new company culture and our focus on, and dedication to, the future of internet technologies.

In this sense, Anthem represents an evolution from our previous experience, origins, and roots to also reflect our focus on the future and our driving passion of using the very best technologies to connect communities to what matters most to them, whether that be work, family, school, shopping, hobbies, games, and more. We encourage everyone to join the Anthem and find their voice in this digital era where the world is at your fingertips.

THE CONSTRUCTION PLAN

We have a plan to get everyone covered.

Wonder what zone you're in? Enter your address to find out.

COMPARE THE DIFFERENCE

Fiber is the ultimate in internet technology. Unlike traditional methods (like cable or DSL), fiber optic internet uses light signals to carry data rather than metallic wires and electrical signals that can corrode. This allows fiber to carry much more information than cable without loss.

Anthem uses Active Ethernet fiber, an installation practice that gives each home a dedicated, direct connection, so you don't share bandwidth with others in your neighborhood. You won't experience slowdowns during times of heavy internet usage, and it's all backed with our exclusive satisfaction Guarantee.

ANTHEM BROADBAND

Each home has a direct connection to the mainline.

CONNECTIVITY: ACTIVE ETHERNET

Pros:

- Dedicated Connection
- Easier to upgrade
- High security
- Not affected by neighbors
- We include a redundant path for more reliability

OTHERS

Many homes share one fiber line that weakens connectivity.

CONNECTIVITY: GPON

Pros:

- Lower upfront cost
- Faster construction
- Shorter connections
- Easier to take down entire Neighborhoods
- More difficult to upgrade
- Less Secure

FIBER IS

"FUTURE PROOF"
